VAST

James T. Thorson

```
library(tinyVAST)
library(fmesher)
set.seed(101)
```

tinyVAST is an R package for fitting vector autoregressive spatio-temporal (VAST) models. We here explore the capacity to specify the vector-autoregressive spatio-temporal component.

Spatio-temporal autoregressive model

We first explore the ability to specify a first-order autoregressive spatio-temporal process:

```
# Simulate settings
theta_xy = 0.4
n_x = n_y = 10
n_t = 15
rho = 0.8
spatial_sd = 0.5
# Simulate GMRFs
R_s = \exp(-\text{theta}_xy * abs(outer(1:n_x, 1:n_y, FUN="-")))
V_ss = spatial_sd^2*kronecker(R_s, R_s)
d = mvtnorm::rmvnorm(n_t, sigma=V_ss)
# Project through time and add mean
for( t in seq_len(n_t) ){
 if(t>1) d[t,] = rho*d[t-1,] + d[t,]
}
\#d = d + 0.5
# Shape into longform data-frame and add error
Data = data.frame( expand.grid(time=1:n_t, x=1:n_x, y=1:n_y), "var"="logn", z=exp(as.vector(d)))
Data$n = tweedie::rtweedie( n=nrow(Data), mu=Data$z, phi=0.5, power=1.5)
mean(Data$n==0)
#> [1] 0.046
# make mesh
mesh = fm_mesh_2d(Data[,c('x','y')])
# fit model
out = fit( dsem = "logn -> logn, 1, rho",
           data = Data,
           formula = n ~ 0 + factor(time),
```

```
spatial_graph = mesh,
          family_link = rbind("obs"=c(1,1)),
          control = tinyVASTcontrol(quiet=TRUE, trace=0) )
out
#> $call
\# fit(data = Data, formula = n \sim 0 + factor(time), dsem = "logn -> logn, 1, rho",
      family\_link = rbind(obs = c(1, 1)), spatial\_graph = mesh,
      control = tinyVASTcontrol(quiet = TRUE, trace = 0))

#> $run_time

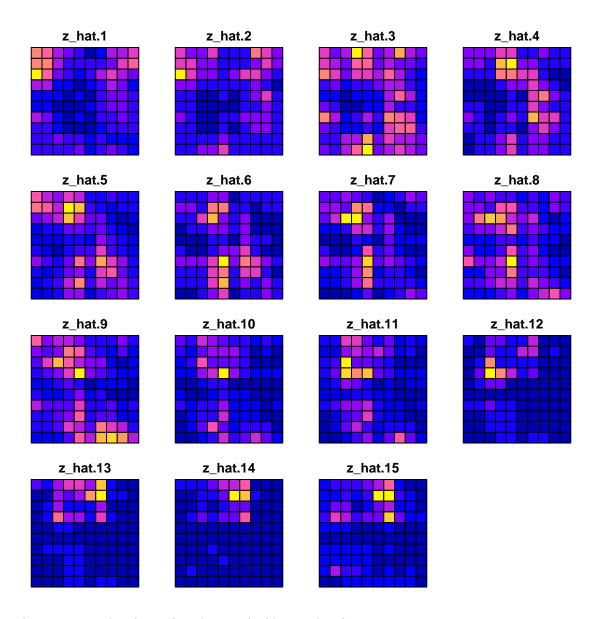

#> Time difference of 38.07576 secs
```

The estimated values for beta_z then correspond to the simulated value for rho and spatial_sd.

We can compare the true densities:

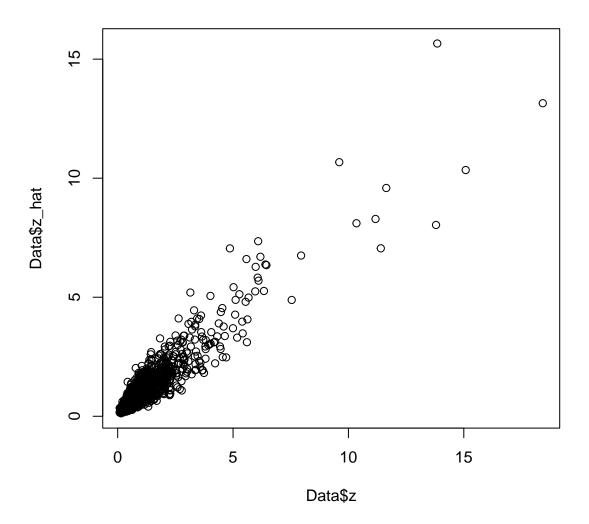

with the estimated densities:

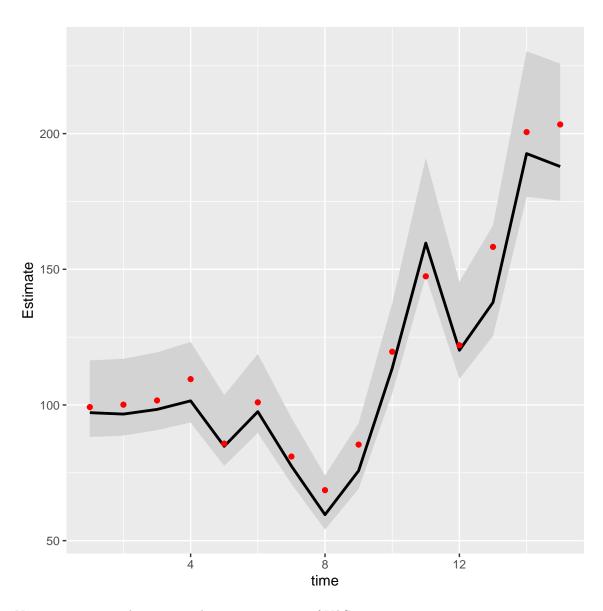

where a scatterplot shows that they are highly correlated:

```
plot( x=Data$z, y=Data$z_hat )
```

We can then calculate the area-weighted total abundance and compare it with its true value:

```
# Predicted sample-weighted total
(Est = sapply( seq_len(n_t), FUN=\(t) integrate_output(out, newdata=subset(Data,time==t)) ))
#>

Or with sdmTMB

```
#library(INLA)
library(sdmTMB)
mesh = make_mesh(Data, c("x","y"), n_knots=n_x*n_y)

start_time = Sys.time()
mysdmTMB = sdmTMB(
   formula = n ~ 0 + factor(time),
   data = Data,
   mesh = mesh,
   spatial = "off",
   spatiotemporal = "ar1",
   time = "time",
   family = tweedie()
)
Sys.time() - start_time
#> Time difference of 29.30128 secs
```

Bivariate spatio-temporal autoregressive model

We next highlight how to specify a bivariate spatio-temporal model with a cross-laggged (vector autoregressive) interaction.

```
# Shape into longform data-frame and add error
Data = data.frame( expand.grid(time=1:n_t, x=1:n_x, y=1:n_y, "var"=c("d1","d2")), z=exp(as.vector(d)))
Data$n = tweedie::rtweedie( n=nrow(Data), mu=Data$z, phi=0.5, power=1.5)
# make mesh
mesh = fm_mesh_2d( Data[,c('x','y')] )
# Define DSEM
dsem = "
 d1 -> d1, 1, b11
 d2 -> d2, 1, b22
 d2 -> d1, 1, b21
 d1 -> d2, 1, b12
 d1 <-> d1, 0, var1
 d2 <-> d2, 0, var1
# fit model
out = fit( dsem = dsem,
         data = Data,
         formula = n \sim 0 + var,
         spatial_graph = mesh,
         family_link = rbind("obs"=c(1,1)),
         control = tinyVASTcontrol(quiet=TRUE, trace=0) )
out
#> $call
\# fit (data = Data, formula = n \sim 0 + var, dsem = dsem, family_link = rbind(obs = c(1,
     1)), spatial_graph = mesh, control = tinyVASTcontrol(quiet = TRUE,
      trace = 0))
#>

```

The values for beta z again correspond to the specified value for interaction-matrix B

We can again calculate the area-weighted total abundance and compare it with its true value:

```
# Predicted sample-weighted total
Est1 = sapply( seq_len(n_t), FUN=\(t) integrate_output(out, newdata=subset(Data,time==t & var=="d1")) )
Est2 = sapply( seq_len(n_t), FUN=\(t) integrate_output(out, newdata=subset(Data,time==t & var=="d2")) )
# True (latent) sample-weighted total
True = tapply( Data$z, INDEX=list("time"=Data$time,"var"=Data$var), FUN=sum )
Index = data.frame( expand.grid(dimnames(True)), "True"=as.vector(True) )
Index = data.frame( Index, rbind(t(Est1), t(Est2)) )
Index$low = Index[,'Est...bias.correct.'] - 1.96*Index[,'Std..Error']
Index$high = Index[,'Est...bias.correct.'] + 1.96*Index[,'Std..Error']
library(ggplot2)
ggplot(Index, aes( time, Estimate )) +
 facet_grid( rows=vars(var), scales="free" ) +
  geom_segment(aes(y = low,
                  yend = high,
                  x = time,
                  xend = time) ) +
  geom_point( aes(x=time, y=Estimate), color = "black") +
  geom_point( aes(x=time, y=True), color = "red" )
```
